

HardieFence™ EasyLock® system (available in WA only)

What is it?

A site-painted, postless system, incorporating 7mm thick interlocking HardieFence sheets with a metal top cap; suited for sandy soil on either sloping or flat sites.

Where do you use it?

On sloping or level residential sites, in Western Australia, where a durable, freestanding fence is required.

What are the key benefits?

Design flexibility.

HardieFence sheet has an overlap on one edge, and an underlap (or smaller corrugation) on the other edge to enable seamless interlocking. This gives a consistent look on either side of the fence, and keeps neighbours happy. To add to this, it's postless, and there are no protruding bolts, sharp edges or nails. It can also be site-painted in a full range of exterior paint colours.

Fast installation.

There is no need to dig post holes and wait for concrete footings to cure, making installation fast.

Security.

HardieFence EasyLock system is designed to be buried into sandy soils, eliminating gaps below the fence on both level and sloping sites. This provides a barrier to weeds growing under the fence and is a great benefit when trying to keep even the most enthusiastic dog from getting out.

HardieFence EasyLock system is resistant to damage from termites, rot and fire.*

A 10-year product warranty gives peace of mind.

Note: All dimensions and masses provided are approximate only and subject to manufacturing tolerances. Masses are based on equilibrium moisture content of product.
* When installed and maintained correctly to the extent set out in James Hardie's published literature current at the time of installation.
